

My name is Iuliana Nenu and I am a 2nd year trainee in Gastroenterology and Hepatology from Cluj-Napoca, Romania. My passion for Hepatology, particularly for hepatocellular carcinoma grew in the clinical years of my medical school. Almost four years ago I became an EASL member and attended the International Liver Congress gaining ideas for future projects. As a medical student I also studied the influence of inflammation regarding tumorigenesis in the Physiology Department from Cluj-Napoca University of Medicine and Pharmacy and managed to publish several articles and a book chapter. In addition, my next objective is to start a PhD regarding liver cancer, inflammation and the influence of microbiota on hepatic carcinogenesis. Currently, I am involved in a project regarding liver cancer and metabolomics, insights that I will present this year at the HCC Summit and the International Liver Congress. In addition, I became member of several professional oncology societies and signed up in various online seminars regarding digestive oncology in order to be up-to-date with the latest trends in cancer study. Thus, I am braiding the study of digestive and liver diseases with oncology.
